NICKOLAS J. S. LIVERO

Software Engineer | Full Stack, Cloud, Industrial Integrations, AI & Automation

Manaus, Amazonas, Brazil - Open to remote international roles
Email: nickolasjl.work@gmail.com
Phone: +55 92 98802-3281
LinkedIn: https://www.linkedin.com/in/nickolaslivero/
GitHub: https://github.com/nickolaslivero
Portfolio: https://nickolaslivero.github.io/

PROFESSIONAL SUMMARY

- Software Engineer building and modernizing industrial and business systems, with experience since 2022 in development, Android QA automation, and R&D.
- Build and evolve Technos systems through IPena Consultoria: gatehouse and maintenance workflows, Android application distribution, and applications for factory operations and logistics integrated with TOTVS Protheus.
- Combine full-stack development with AWS cost optimization, CI/CD, and production support; modernize inherited systems while preserving business workflows and compatibility.

TECHNICAL SKILLS

- Languages: TypeScript, JavaScript, Dart, Python, SQL, Kotlin, Java, C#.
- Web & Backend: React, Next.js, Flutter Web, Node.js, NestJS, Express, ASP.NET Core/.NET, REST APIs, Swagger/OpenAPI.
- Data & Integrations: PostgreSQL, relational modeling, migrations, reporting, business-rule validation, ERP APIs, TOTVS Protheus.
- Mobile & QA: Flutter Android/Windows, Android Studio, ADB, UI Automator, physical-device validation, Python automation, pytest, Jest, Supertest, Playwright, Flutter Test.
- Cloud & Delivery: AWS Lightsail, S3, CloudFront, Route 53, IAM roles, Secrets Manager; Docker/Compose, Linux, Nginx, Azure DevOps, CI/CD, PowerShell, Git.
- AI & R&D: Python assistants with LangChain/LangGraph (freelance); BERT classifier training and fine-tuning, predictive classification, model evaluation, generative AI experiments, and computer vision (R&D).

PROFESSIONAL EXPERIENCE

Contract Full Stack Software Engineer

IPena Consultoria - Manaus, Brazil
Mar 2024 - Present

- Developed a gatehouse and maintenance-request system for Technos, modernizing legacy workflows with Next.js/React, ASP.NET Core, PostgreSQL, and TOTVS Protheus APIs.
- Developed and maintain Technos' production Android application distribution platform: APK catalog, targeted releases, device tracking, NestJS/Prisma APIs, Next.js administration, and Flutter updater integration.
- Maintain and modernize an inherited Flutter Android factory application, preserving Protheus integrations, barcode workflows, and usability on handheld barcode scanners and tablets.
- Built a Flutter Web logistics dashboard with a server-side Dart proxy for Protheus, retaining the last complete dataset during upstream failures.
- Implemented Azure DevOps CI/CD and maintainer documentation for industrial systems, supporting traceable builds, pre-production validation, and approval-controlled releases.
- Developed and deployed a production non-fiscal payroll and HR platform with Flutter Web, TypeScript/Express APIs, PostgreSQL, monthly closing, and reporting; maintain its business workflows and recurring client support.
- Owned payroll-platform AWS deployment and operations; migrated application/database services from ECS/EC2/RDS to Lightsail/Docker/PostgreSQL to reduce hosting cost and complexity, preserving S3/CloudFront delivery and off-host backups with isolated restore and data-parity checks.
- Built and deployed IPena's institutional website with Next.js static export, S3 hosting, and CloudFront delivery within its Route 53 DNS infrastructure.
- Built an Ubuntu/Docker development and pre-production environment; migrated existing Python business applications between servers while preserving behavior within the agreed scope.

Independent Software Engineer (Founder)

NLivero Software e Consultoria Ltda. - Manaus, Brazil
Aug 2026 - Present

- Run an independent software and technical consulting practice alongside engagements through IPena Consultoria; prepare scoped infrastructure and cloud proposals covering Linux, VPS, deployment, and troubleshooting.

Freelance Software Developer

Independent client engagements

- In 2024, contributed to WhatsApp assistants tailored to client contexts using Python, LangChain, and LangGraph.
- In a separate engagement, developed and delivered a Next.js/React frontend MVP for project management.
- Developed an initial offline Flutter Windows application intended to digitize service receipts and support vehicle-plate lookup, based on an automotive client's document templates.

QA Automation and AI R&D Intern

INDT - Manaus, Brazil
Jun 2023 - May 2025

- Developed Python automation for Android validation, regression testing, and internal QA execution workflows.
- Created UI Automator tests using screen XML hierarchies and widget attributes; troubleshot physical devices with Android Studio and ADB.
- Contributed to QA-focused machine-learning R&D, including training and fine-tuning BERT classifiers to assess test-case suitability for automation.
- Supported dataset-based model training, evaluation tests, and predictive-classification experiments to inform automated test creation; also contributed to generative AI experiments in this R&D context.
- Used pytest and Cypress in validation workflows and worked with Git, Gerrit, Jenkins, code review, and agile delivery practices.
- Supported Linux environments, networking, and VPN automation for distributed validation workflows.

R&D Scholarship Holder - Embedded Systems

State University of Amazonas (UEA) - Manaus, Brazil
Jun 2022 - Jun 2023

- Migrated legacy Java Android workflows to Flutter/Dart in research prototypes.
- Built React dashboards integrated with Python computer vision modules for industrial monitoring and embedded-system research.
- Worked with data processing, classification, and model validation in academic and R&D contexts.

SELECTED PROJECTS

- Industrial gatehouse and maintenance workflows: visitor, employee, vehicle, and goods-movement records; role-based permissions, audit trails, and Protheus-backed service-request lookup and creation.
- Payroll administration and AWS migration: multi-company HR workflows, monthly closing, and reporting, with simplified hosting, off-host backups, and migration integrity and recovery checks.
- Enterprise Android device-management pilot: Kotlin Device Owner agent with kiosk/allowlist policies, temporary view-only screen sessions, and a NestJS/Next.js administration dashboard.

Client source code and operational data remain confidential.

EDUCATION

Bachelor's Degree in Information Systems
State University of Amazonas (UEA), Manaus, Brazil - Completed Sep 2025
